3R3003

GRAPHITE FLAKES

A powdery graphite flake designed for the lubrication on mechanisms with close tolerances between the surfaces. The 3R3003 has a particle size less than 200 mesh and is available in a plastic can with a tight cover.

APPLICATIONS

These flakes lubricate close contact mechanisms between the surfaces for bearings such as in COMPOSEUSES?, gas crucibles and burner heads. This material is also suitable on surfaces that are exposed to temperatures, pressures and speeds that are elevated, and also to movements in swab cylinders, piston rods and crosshead guides.
